
2026H1 Operation Briefing of Nan Ya PCB Corp.

August 27th 2026

Disclaimer

The description of historical events might include the information that was not reviewed by accountants. Thus, it might be insufficient to fully exhibit the financial status or operation results of Nan Ya PCB Corp.

The actual operation results, financial status, and sales outlook in the future might be different from what will be indicated or implied in this meeting. The reasons may be including but not limited to the market demand, price fluctuation, competition dynamic, global economy, supply-chain, foreign exchange rate, and other risks that the Company cannot control.

Except as required by law, we undertake no obligation to update any forward-looking statement, whether as a result of new information, future events, or otherwise.

Agenda

- **Company Profile**
- **Financial Status**
- **Future Product Development**
- **Operational Strategies in 2026**

Company Profile

Business Overview

- **Subsidiary Company of Nan Ya Plastics Corp.**
- **Manufacture and Sell IC Substrates and PCBs**
- **2026H1 Consolidated Revenues: NTD 24.8 Billion**
- **Market Value: NTD 765.7 Billion(June 30th 2026)**
- **Production Locations : Taiwan and China**

Company Profile

Milestone

- 1985 : PCB business unit was formed at Nan Ya Plastics Corp. and started manufacturing PCBs
- 1997 : Approved by the Board of Nan Ya Plastics, Nan Ya PCB Corp. was established via reinvestment
- 1999 : Reinvested Nan Ya PCB Kun-shan Company with capital of USD29.8 million
- **2000 : Started manufacturing wire-bonding substrates**
- **2001 : Upgraded technologies and produced flip-chip substrates**
- 2002 : Established Nan Ya PCB America Corp.
- 2006 : Listed on Taiwan Stock Exchange with ticker 8046 TT
- 2013 : Upgraded technologies and produced Embedded substrates
- 2016 : Started to produce System in Package (SiP) substrates
- 2019 : In response to market demand, Nan Ya PCB Corp. started to build ABF substrate production line at Kun-shan Campus
- **2021 : Kun-shan Campus started to manufacture ABF substrates**
- **2022 : Shulin Campus started to manufacture ABF substrates**

Financial Status

Consolidated Revenues(IFRS) in Last 3 Years

NTD Million

- **Revenues in 25H1 were 18.5% greater than those in 24H1:**

Higher demand for high-end server, 800G switch, and enterprise SSD IC substrates drove YoY revenue growth in 25H1.

- **Revenues in 26H1 were 37.2% greater than those in 25H1:**

Sustained data center demand and increased high-end IC substrate sales drove further YoY revenue growth in 26H1.

Financial Status

Quarterly Consolidated Revenues(IFRS) in a Year

NTD Million

■ **Revenues in 25Q4 were 1.8% greater than those in 25Q3:**

Driven by increased demand for high-end servers and switches, revenue in the fourth quarter increased compared to the third quarter.

■ **Revenues in 26Q1 were 0.1% greater than those in 25Q4:**

High-end IC substrate demand offset fewer working days, driving 26Q1 revenue above 25Q4 levels.

■ **Revenues in 26Q2 were 21.5% greater than those in 26Q1:**

Mass production of 1.6T switch substrates drove Q2 revenue to grow from Q1.

Financial Status

Operation Profits(Losses) in Last 3 Years

- **Operation profits in 25H1 were increasing NTD 1,400.1 Mn from 24H1:**
Robust high-end networking demand and a better product mix boosted operating profit.
- **Operation profits in 26H1 were increasing NTD 3,852.4 Mn from 25H1:**
Rising demand for high-end servers, switches, and memory fueled operating profit growth.

Financial Status

Quarterly Operation Profits in a Year

- **Operation profits in 25Q4 were increasing NTD 342.7 Mn from 25Q3:**
With an rising demand for high-end servers and switches, operating profit in the fourth quarter increased compared with the third quarter.
- **Operation profits in 26Q1 were increasing NTD 389.2 Mn from 25Q4:**
Driven by steady demand in server and switch IC substrates, 26Q1 operating profit saw quarterly growth.
- **Operation profits in 26Q2 were increasing NTD 1,547.2 Mn from 26Q1:**
Mass production of IC substrates for 1.6T switches optimized the product mix, increasing Q2 operating income compared to Q1.

Financial Status

Revenue Structure(By Applications)

■ Computer ■ Networking ■ Consumer ■ Automotive ■ AI&HPC

- Impacted by component shortages, sales growth for PCs and consumer electronics was constrained. Consequently, our revenue contribution from related applications in 26H1 was on par with 2025.
- The ongoing high-end switch upgrade trend in data centers kept our networking revenue contribution elevated through 26H1.

Financial Status

Revenue Structure(By Applications)

■ Computer ■ Networking ■ Consumer ■ Automotive ■ AI&HPC

- With automotive demand remaining weak and supply chains affected, our 26H1 revenue contribution from automotive electronics applications was on par with 2025.
- Driven by steady data center demand for AI and HPC, our 26H1 revenue contribution from these applications was on par with 2025.

Future Product Development

Continue to Expand High Value Products

■ ABF Substrate

As CSPs increased their data center capital expenditures, the Company collaborated with customers to develop large-area, high-layer-count substrates for next-generation AI server ASICs, CPUs, and high-speed switch chips. Additionally, optimistic about the growth of inference AI, the Company will mass-produce substrate chips for high-end AI PCs, thereby increasing the proportion of high-value-added products.

■ BT Substrate

On top of developing substrates for next-gen mobile SiP mainboards, smart glasses, 5G base stations, and automotive signal switches, we've also partnered with customers to work on substrates for next-gen servers and power IC chips. This comes as AI chips demand power management modules with higher power conversion efficiency, and it's going to help drive our overall profitability.

■ Conventional PCB

Driven by demand for high-end PCBs from data center servers and switches, the Company will develop and mass-produce products to capture related business opportunities, such as server mainboards, server secondary boards, and high-layer switch boards. Additionally, targeting opportunities across various edge AI applications, the Company will mass-produce high-end PC and LED circuit boards to further diversify its product portfolio.

Operational Strategies in 2026

Implementing 4 Major Transformations

- **Product Transformation:** Continuously expanding the sales mix of cloud computing, edge computing, and high-speed transmission products to foster a higher-value and more diversified product portfolio.
- **Business Transformation:** Develop new materials, technologies, and products to strengthen the Company's capabilities.
- **Digital Transformation:** Leverage digital technologies to enhance AI and digital transformation, achieving intelligent operations.
- **Low-Carbon Transformation:** Expand the use of green energy, commit to energy conservation and carbon reduction, and implement the promotion of a circular economy.

Thank You
